- 3.11 Diag Test (Burn-in) Procedure
- 3.12 Parts list for 1541

## Chapter One

### 1.1 Scope

In this chapter, a description is made of the procedures necessary for servicing the Model 1540/1541 Floppy Disk Drive.

### 1.2 Unpacking

Special care should be exercised during unpacking not to damage the unit.

Unpacking procedures are as follows:

- a) Remove cardboard sleeve from styro-foam box
- b) Open 'styro-foam' box and remove drive
- c) Check the drives front door for proper operation

```
*****
*                                     *
*                               Caution                               *
*                                     *
*   Do Not Use Magnetized Tools   *
*                                     *

```

### 1.3 Protection against noise

A weak signal from the media is detected in the head section of the drive. Hence, do not install the drive near a TV set or other areas where electromagnetic noise is generated. (i.e. motors, air-conditioners, etc)

### 1.7 Input/Output Cable

The length of the cable between the host and the drive (between the host and the last drive when the drives are daisy chained) should not exceed 5 meters (16 feet).

### 1.8 DC power source

The drive is powered by a internal power supply providing the drive with +12V and +5V.

### 1.9 Initial inspection

The drive can be briefly inspected for its operation by the following procedure. Install the drive, connect the power and I/O cables. Turn drive on and make sure the front panel power lamp is on. Proceed to step 2.2.

#### 1.10 Outline of functions

The 1540/1541 Minifloppy Disk Drive mechanism is composed of the data read/write head, track positioning mechanism, spindle drive mechanism and eject mechanism.

#### 1.11 Read/Write Head

The Read/Write head uses a glass-bonded, ferrite/ceramic head. Track-to-track erasing is accomplished by the straddle erase method. The surface of the Read/Write head is mirror-ground to minimize wear of the head and media. Also, the head is designed in such a way that the maximum signal can be obtained from the media surface.

#### 1.12 Track positioning mechanism

Positioning of the Read/Write Head is accomplished by a stepping motor and steel belt. The stepping motor rotates clockwise or counter-clockwise by two steps per track. The control circuit on the logic board selects the direction and number of step to the desired track.

#### 1.13 Spindle drive mechanism

The spindle drive motor operates on 12 VDC and turns the spindle, through a belt drive, at 300 revolutions per minute. The speed of the drive motor is controlled by a feedback signal from a tachometer which is housed in the drive motor assembly. The feedback signal controls a servo amp that supplies the 12 VDC drive current.

#### 1.14 Eject mechanism

When the media is inserted in the Disk Drive and the door is closed the media is clamped by the spindle and hub. At this time the ejector mechanism is loaded by the insertion of the disk and locked. When the door is opened, the ejector mechanism is unlocked and the media pops out of the door.

## Chapter Two

### 2.1 Mechanism Explanation

The 1540/1541 mechanism is installed in the system horizontally, however the drive will function if mounted vertically. The mechanical parts of the drive include an aluminum chassis, a stepping motor, head positioning assembly, drive motor, a hub and spindle assembly for centering and retaining the media during operation. The magnetic head is of a glass ceramic construction.

### 2.2 Function explanation

The drive is itself an independent memory device. The drive is composed of a media clamp rotating mechanism, ahead positioning mechanism and an eject mechanism. When the front door opens, the media can be inserted. All positioning operation excluding insertion and removal of the media are controlled by the internal guide mechanism. Closing the front door causes the media clamp mechanism to operate. Two operations are performed in the following order:

- a) The media is centered.
- b) The media is clamped and retained between the spindle and the hub.

The spindle and hub rotate at 300 r.p.m. through a closed-loop control circuit employing a D.C. motor/tachometer. It is important that the relationship between the head and the media is maintained correctly during operation. For this purpose, a pressure pad is used to hold and press down the media (about 12g) from the opposite side of the head, to maintain the correct contact with the head. This head assembly is coupled by a metal band to a four phase stepping motor the performs the track positioning. One step of the stepping motor corresponds to a 1/2 track movement. Use of a high-speed stepping motor and metal band drive, this series of disk drives can perform access operations at a very high speed.

### 2.3 Assembly procedure

2.3.1 The housing assembly; install the eject pin and the spindle.

2.3.2 The housing assembly; on the reverse side install the spindle pulley.

### 2.3.3 FIG 1, The housing unit.

| Part | Description       |
|------|-------------------|
| 22   | spindle           |
| 33   | housing assembly. |
| 53   | eject pin         |

2.3.4 The stepping motor assembly; install the stepping pulley.

2.3.5 FIG 2, The stepping motor unit

| Part | Description             |
|------|-------------------------|
| 50   | stepping motor assembly |
| 55   | connector housing       |
| 58   | stepper pulley          |

2.3.6 The D.C. motor assembly; install the motor pulley.

2.3.7 FIG 3, D.C. motor and control PCB

| Part | Description       |
|------|-------------------|
| 44   | motor control PCB |
| 48   | D.C. motor        |
| 51   | connector housing |
| 59   | D.C. motor pulley |

FIG. 6

| Part | Description     | Part | Description       |
|------|-----------------|------|-------------------|
| 20   | binder screw    | 37   | washer            |
| 21   | diskette guide  | 38   | eject spring      |
| 28   | LED clamp       | 39   | eject plate       |
| 29   | front panel     | 40   | slider            |
| 30   | Flush screw     | 43   | diskette guide    |
| 31   | LED assembly    | 52   | connector housing |
| 32   | LED holder ring |      |                   |

FIG 7.

| Part | Description |
|------|-------------|
|------|-------------|

|    |                    |
|----|--------------------|
| 15 | binder screw       |
| 18 | binder screw       |
| 24 | tension pulley     |
| 25 | guide shaft keeper |
| 26 | guide shaft        |
| 34 | metal band         |
| 35 | washer             |
| 36 | head assembly      |
| 56 | tension spring     |

FIG 8

| Part | Description  |
|------|--------------|
| 20   | binder screw |
| 45   | cable clamp  |
| 49   | cable ties   |

FIG 9

| Part | Description     | Part | Description          |
|------|-----------------|------|----------------------|
| 1    | door assembly   | 13   | hub support          |
| 2    | collar          | 14   | hub frame            |
| 3    | clamp spring    | 15   | binder screw         |
| 5    | thrust washer   | 16   | spring washer        |
| 6    | collet assembly | 17   | arm support assembly |
| 7    | hub spring      | 18   | binder screw         |
| 8    | hub             | 19   | pad plate assembly   |
| 9    | hub shaft       | 27   | hinge spring         |
| 10   | door spring     | 60   | collet               |
| 11   | E-washer        | 61   | collet bearing       |

2.3.8 FIG. 4, Diskette guide, LED assembly and connector housing.

| Part | Description       |
|------|-------------------|
| 31   | LED assembly      |
| 43   | diskette guide    |
| 52   | connector housing |

- 2.3.9 Secure the D.C. motor from the reverse side of the housing assembly with two screws.
- 2.3.10 Put the motor control PCB into hole 'A' and secure it with two screws.
- 2.3.11 Secure the stepping motor with two screws.
- 2.3.12 Secure the carriage stopper with a screw.
- 2.3.13 Install the connector housing '52' into the hole 'B' and remove through hole 'C'.
- 2.3.14 Secure the two diskette guides '21' and '43' with two screws each.
- 2.3.15 Install the LED holder in the front panel.
- 2.3.16 Insert the LED assembly into the LED holder ring.
- 2.3.17 Install the led into the LED holder, then push the LED holder ring onto the LED holder.
- 2.3.18 Attach the front panel with four flush screws.
- 2.3.19 Secure the eject plate with a screw.
- 2.3.20 Wind the metal band around the tension pulley.
- 2.3.21 Insert the guide shafts into the head assembly. Install the tension pullet as shown in figure 8
- 2.3.22 Secure the guide shaft keepers by two screws each.
- 2.3.23 Wind the metal band around the stepper pulley and secure it with a screw to the stepper motor pulley.
- 2.3.24 Hook the spring to the tension pulley and install unit in the slot in the housing assembly.
- 2.3.25 Hook the opposite end of the spring to the housing assembly.
- 2.3.26 Fasten cable ties to the cables.
- 2.3.27 Secure the cable clamp with a screw as shown in FIG 8.
- 2.3.28 Secure the arm support assembly with a screw to the hub support.
- 2.3.29 Insert the hub shaft into the hub, the hub spring, the collet assy, the thrust washer, the collar, the clamp spring and two collars.
- 2.3.30 Insert the hub shaft into the frame and the hub support and fasten it at the E-washer.
- 2.3.31 Set the door assembly and the door spring at the hub frame.
- 2.3.32 Secure the pad plate assembly with a screw to the frame at the location shown in FIG 9
- 2.3.33 Secure the two hinge springs with two screws each.

FIG. 5

| Part | Description             |
|------|-------------------------|
| 18   | binder screw            |
| 20   | binder screw            |
| 37   | washer                  |
| 41   | spring washer           |
| 42   | carriage stopper        |
| 44   | motor control PCB       |
| 50   | stepping motor assembly |

2.3.36 Place the belt over the D.C. motor pulley and partially on the spindle pulley.

2.3.37 By turning the spindle pulley the rest of the belt will seat completely on the pulley.

2.3.38 FIG 10

| Part | Description |
|------|-------------|
| 12   | drive belt  |

2.3.39 FIG 11; Completed Drive Mechanism

## Chapter Three

### 3.1 Description

Since the disk drive is placed under direct control of the interface and power supply, no special procedure is required for starting and operation.

### 3.2 Operating procedure

Make sure that the power supply and I/O connector are connected, then insert the disk in accordance with the following procedure.

#### 3.2.1 Inserting the media

- a) Apply DC voltage to the drive.
- b) Open the front door.

- c) With the index hole and write protect notch being placed on the left side of the jacket, push the media in, when the media is fully inserted the locking action can be felt.
- d) Push the door downward and close the door so that it is locked firmly

#### 3.2.2 Extracting the media

- a) Open the front door. The media will pop out automatically to a position where you can extract it easily.
- b) For protection of the recorded data, the media should always be stored in its envelope.
- c) Close the door of the drive.

### 3.3 Media handling procedure

Since the media has been subjected to a write operation it naturally contains information, adequate attention must be paid to its handling.

In order to extend the life of the media and eliminate the causes of errors, it is best to take the following steps:

- a) When writing something on the jacket label of the media, do not use a ball point pen or pencil, use felt-tipped pens.
- b) Do not hold the edges of the media with paper clips or the like.
- c) Do not touch the media exposed in the slot of the jacket.
- d) Do not attempt to clean the media.
- e) Do not keep the media in the areas where there is a strong magnetic field.
- f) The diskette should be kept in its jacket.
- g) Special care should be exercised so that the media is kept free from liquid, dust, metal particles, etc.
- h) Take care not to exceed the following environmental conditions:

|                   |            |
|-------------------|------------|
| Temperature       | 10 to 47°C |
| Relative humidity | 20 to 80 % |

#### 3.4 Seek error

Few seek errors will be experienced due to the low stepping rate, less than 12 msec/track. In case of a seek error, however, recalibration of track position can be performed. This can be done by repeatedly stepping the head towards track 0 until track 0 status is detected.

#### 3.5 Write error

In order to check the quality of the data, perform a read-after-write operation. When data can not be read, rewrite that track and sector once again.

When data can not be read after four such operations track is defective.

#### 3.6 Read error

What happens quite often when performing a read operation is a soft error. A soft error is defined to be a read error which is recoverable by making ten or less read operations. However, in the event no recovery is made in ten operations, move one step from the track in the same direction as the previous step, then return one step. If this fails to read the data, this error is unrecoverable.

### 3.7 Description

Periodic maintenance is indispensable so that this type of peripheral equipment operates properly. It is particularly important to periodically clean the head and check the load pad. Repairs and adjustments should be made in accordance with the procedures below.

### 3.8 Head Cleaning

Check for excessive dust or magnetic oxide on the load pad. With the door open (do not move upper arm greater than what is provided by opening the front door) clean head with lint free cotton cloth or 'Q-tip' in 91% isopropyl alcohol. Wipe the head carefully to remove any dust and/or oxide.

### 3.9 Adjustment Procedure

In case of a malfunction or parts replacement, make the following adjustments. In order to maintain the interchangeability of the media between drives it is desirable to check each drive against a master alignment diskette.

#### 3.9.1 Track adjustment (radial track)

- Connect I/O cable and restore the head to track 00.
- Insert a 48tpi alignment diskette and close the door.
- Connect two oscilloscope probes to pin 1 and pin 14 of UH6 (592), set oscilloscope to analog mode at 50mV/cm and 200 msec/div.
- Load the head and allow it to seek to track 16, check for cats eye wave form. When the cats eye lobe ratio is 70% or less, loosen the stepping motor mounting screws, turn the stepping motor to obtain the lobe ratio of 90% or less.
- After allowing the head to track 34, return it to track 16 and recheck the cats eye. If the ratio is correct tighten the stepping motor screws.

$$\frac{a}{b} \times 100 \geq 70$$

Cats eye lobe ratio

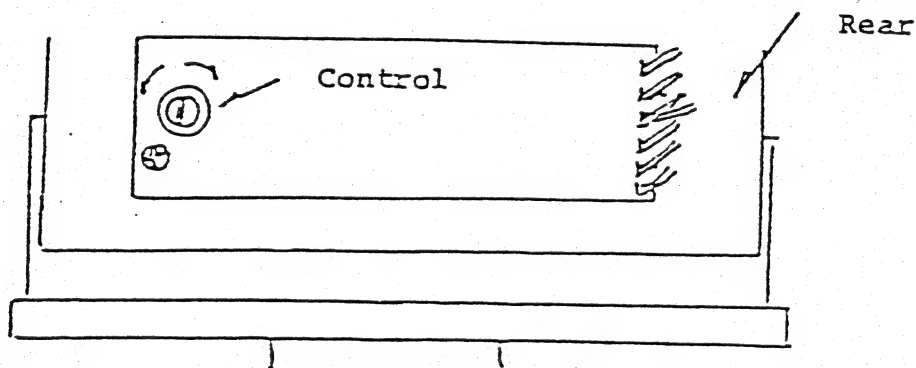

### 3.9.2 Track 00 adjustment

The drive is not provided with a track 00 sensor. To adjust, let the head over step in the track 00 direction and adjust the limiter position to obtain a clearance less than  $0.25\text{mm} - 0.4\text{mm}$ .

### 3.9.3 Speed control

Turn the variable resistor on the motor control board until the tachometer disk on the spindle pulley appears stationary when viewed with a fluorescent lamp.

### 3.10 Limiter Adjustment Procedure

- (1) Set the CPU to permit ARV-03 to execute.
- (2) Connect the drive to the equipment body (1541).
- (3) Switch ON the power to the equipment and insert a medium (dummy) into the drive and close the door.
- (4) Press **[A]** and **[RET]** keys.
- (5) Loosen the limiter screw a 1/4 turn, counterclockwise, position the limiter as instructed below, then retighten the screw.

① Move the limiter in (a)  $\Rightarrow$  direction until it stops.

② Next, move it 0.25 to 0.4 mm in (b)  $\Rightarrow$  direction.

Hold the limiter using a screwdriver as a lever so that the limiter does not rotate together with the screw when it is tightened. (Be careful not to damage the steel belt with the screwdriver.) As a criterion for screw tightening, the screw should not move when a torque of 5 kg-cm is applied to it.

(6) Press [R] key and check the clearance. (Clearance\_\_\_\_)

(7) Press [D] key and check the sound.

\* Sound checking method: Shall be the same evaluation method as that when making a bump test.

(8) Check the clearance.

\* A 0.25-mm clearance gage shall be inserted into the clearance and a 0.4mm clearance gage shall be not inseterted.

When OK: Press [RET] key.

When NG: Press [N] and [RET] key.

Retry beginning (4).

(9) Press [SP] key.

\* Visually confirm that the pulley moves towards the 1TK OUTER side and contacts the limiter.

When OK: Press [RET] key.

When NG: Press [N] and [RET] key.

Retry beginning (4).

(10) Press  key.

\* Visually confirm that the limiter does not move towards the outer side.

When OK: Press  key.

When NG: Press  and  key.

Retry beginning (4).

(11) Remove the medium and switch OFF the power (1541 side only).

(12) Disconnect the connector.

(10) Press **SP** key.

\* Visually confirm that the limiter does not move towards the outer side.

When OK: Press **RET** key.

When NG: Press **N** and **RET** key.

Retry beginning (4).

(11) Remove the medium and switch OFF the power (1541 side only).

(12) Disconnect the connector.

### 3.11 DIAG TEST (BURN-IN) Procedure

#### 3.11.1 Instrument for this test

Computer : C-64  
CRT Monitor : 1510 or 1701 or the equivalent  
Floppy Disk : 1541  
PRG. Diskette : "DIAG" Diskette

#### 3.11.2 Connection

#### 3.11.3 Procedure

- (1) After setting the PRG diskette in to 1541 press keys as follows:

LOAD "DIAG \*", 8

After the display of "READY" press key - **R U N RETURN**

After the following

appears on the screen, pull out the PRG diskette and store it.

Screen 1

CONNECT TEST DISK

TURN ON

PRESS F1 WHEN READY

- (2) The following appears approx. 20 seconds after **F1** key is pressed when the diskette is not set. Confirm that the red LED lamp of the test floppy disk is blinking.

Screen 2 1541 DIAG START

SEE LED

LED BLINK ?

YES=PRESS F1

NO =PRESS F3

- (3) After Confirmation of the LED lamp the following appears when **F1** key is pressed. Remove the Serial cable from the floppy disk and set the floppy disk to be tested next. The screen 1 will be displayed after **F1** key is pressed again.

Screen3 REMOVE SERIAL CABLE  
CONTINUE DIAG TEST?  
YES=PRESS F1  
NO=PRESS F3

- (4) Under the following condition the floppy disk whose LED lamp blinks by the above procedure. The floppy disk is qualified when the LED lamp still blinks in the same way after the burn-in.

### 3.11.2 PARTS LIST FOR 1541

| <u>No.</u> | <u>Name</u>                             | <u>P/No.</u> | <u>Q'ty</u> |
|------------|---|--------------|-------------|
| 1          | Rating Label                            | 1540030-01   | 1           |

# 1. FLOPPY DISK DRIVE

1. THIS SPECIFICATION DESCRIBES A THIN MINIFLOPPY DISK DRIVE FOR USE IN COMPUTER SYSTEM.

## 2. GENERAL SPECIFICATION

### 2-1 CAPACITY (UNFORMATTED)

MEDIA 201K BYTE  
TRACK 5000 ~ 6153 BYTE

### 2-2 SECTOR METHOD

SOFT

### 2-3 SPINDLE ACTUATOR

BELT

### 2-4 HEAD POSITIONING METHOD

METAL BAND

### 2-5 ROTATIONAL SPEED

300 RPM

### 2-6 TRACK DENSITY

48 TPI

### 2-7 NUMBER OF TRACKS

35 (40 MAX)

### 2-8 TRANSFER RATE

250K BIT/S

### 2-9 RECORDING METHOD

GCR

### 2-10 ACCESS TIME

TRACK TO TRACK

12M SEC

SETTLING

15M SEC

### 2-11 MOTOR START TIME

1 SEC MAX

## 3. ENVIRONMENTAL

### 3-1 TEMPERATURE

OPERATING

10 ~ 47°C

STORAGE

-22 ~ 60°C

### 3-2 HUMIDITY (WITHOUT CONDENSATION)

OPERATING

20 ~ 80 %RH

STORAGE

1 ~ 95 %RH

## 4. RELIABILITY

### 4-1 ERROR RATE

SOFT READ ERRORS

$1 \times 10^{-9}$  / BIT

SEEK ERRORS

$1 \times 10^{-6}$  / SEEKS

### 4-2 MTBF (MOTOR ON DUTY 20%)

$8 \times 10^3$  HOURS

### 4-3 MEDIA LIFE

$3 \times 10^6$  PASSES PER TRACK

## REVISIONS

| LTR | ZONE | DESCRIPTION            | DATE    | APPROVED           |
|-----|------|------------------------|---------|--------------------|
| A   |      | PRODUCTION RELEASE     | 3-15-89 | <i>[Signature]</i> |
| B   |      | REVISED PER ECO 840312 | 7-10-89 | <i>[Signature]</i> |

## 5. POWER

5-1 12±0.6 V DC

1.8 A MAX.

## 6. MOUNTING

6-1 TOP LOADING

YES

FRONT LOADING

YES

DISKETTE VERTICAL

YES

DISKETTE HORIZONTAL

STEPPING MOTOR UP

NO

STEPPING MOTOR DOWN

YES

## 7. HEAD

SINGLE R/W GAP WITH SEPARATE STRADDLE ERASE

7-1 WRITE CURRENT

7 MA P-P

7-2 ERASE CURRENT

40 MA

7-3 READ OUTPUT

190MV P-P MIN.

(THROUGH 1541 AMP.)

AT 5162 FCI (TR.34)

1.4VP-P MAX.

AT 1768 FCI (TR.00)

7-4 RESOLUTION

EOUT 5162 FCI

EOUT 2521 FCI

EOUT 3536 FCI

EOUT 1768 FCI

≥ 0.55 (TR.34)

≤ 0.95 (TR.00)

## 8. STEPPING MOTOR

8-1 ONE STEP ANGLE

1.8°

8-2 OPERATING VOLTAGE

12V ± 10% DC

8-3 MOTOR CURRENT PER PHASE

400 MA MAX.

8-4 DRIVE MODE

1 PHASE

## 9. SPINDLE MOTOR

9-1 MOTOR SPEED

2340 RPM

9-2 STALL CURRENT

1.1 A

9-3 DRIFT

INITIAL

300RPM ± 1.5%

LONG TIME

300RPM ± 2.9%

## 10. PHYSICAL DIMENTION (INCLUSIVE OF FRONT PANEL)

10-1 HEIGHT

42.9 MM

10-2 WIDTH

193 MM

10-3 LENGTH

149.3 MM

10-4 WEIGHT

950 G (2.09 POUND) MAX.

## 11. TRACK ØØ LIMITER

+0.25 MM (+0.01 IN)

+0.1 MM (+0.004 IN)

## 2. HEAD ASSEMBLY

### 1. SCOPE

THIS SPECIFICATION DESCRIBES A HEAD ASSEMBLY FOR USE D500 FLOPPY DISK DRIVE.

### 2. PHYSICAL

#### 2-1 HEAD TYPE

SINGLE R/W GAP SEPARATE STRADDLE ERASE

#### 2-2 HEAD/MEDIA INTERFACE

1/NCNTACT, CERAMIC AND FERRITE WEAR SURFACES

#### 2-3 READ/WRITE GAP

100 MICRO INCHES

#### 2-4 CLEANING

THE HEAD CONSTRUCTION SHALL ALLOW PERIODIC CLEANING WITH METHYL-ALCOHOL OR 1-1-1 TRICHLOROETHANE WITHOUT HARM.

### 3. PERFORMANCE

#### 3-1 TEMPERATURE RANGE

OPERATING 0~52°C  
STORAGE -45~+71°C

#### 3-2 HUMIDITY RANGE

OPERATING 8~80% RH  
STORAGE NOCONDITIONING

#### 3-3 DESIGN LIFE

1600 HOURS IN CONTACT WITH DISKETTE AT 18 G PRESSURE PAD FORCE

#### 3-4 PRESSURE PAD FORCE

18 ± 2 G A 0.197" DIAMETER PAD GCR

#### 3-5 RECORDING METHOD

DATALIFE MD525-01

#### 3-6 RECORDING MEDIA

#### 3-7 HEAD/MEDIA VELOCITY

45~70.7 INCHES/SEC, AT 300 RPM UP TO 5536 FCI AT 300 RPM ON TRACK 39

#### 3-8 DATA PACKING DENSITY

#### 3-9 WRITE CURRENT

7 MA P-P

#### 3-10 ERASE CURRENT

40 MA

#### 3-11 READ OUTPUT

(THROUGH 1541 AMP)

190 MV P-P MIN. AT 5162 FCI (TR. 34)  
1.4 VP-P MAX. AT 1768 FCI (TR. 00)

## REVISIONS

| LTR | ZONE | DESCRIPTION | DATE | APPROVED |
|-----|------|-------------|------|----------|
|     |      | SEE SHEET 1 |      |          |

### 3-12 RESOLUTION

|      |      |     |                 |
|------|------|-----|-----------------|
| EOUT | 5162 | FCI | ≥ 0.55 (TR. 34) |
| EOUT | 2581 | FCI | ≥               |
| EOUT | 3536 | FCI | ≤ 0.95 (TR. 00) |
| EOUT | 1768 | FCI | ≥               |

### 3-13 OVERWRITE MODULATION

WRITE 1F (1768 FCI).  
THEN WRITE 2F (3536 FCI)  
THE RATIO OF 2F AMPLITUDE TO REMAINING (OVERWRITTEN) 1F IS 30 DB MIN.

## 4. ELECTRICAL

### 4-1 INDUCTANCE

READ/WRITE, PER LEG 600 ± 120 μH  
BALANCE, LEG TO LEG 1 ± 0.2  
ERASE 1.5 MH

### 4-2 RESISTANCE

READ/WRITE, PER LEG 25 OHMS MAX.  
ERASE 20 OHMS MAX.

### 4-3 RESONANCE FREQUENCY

400 KHZ MIN.

### 4-4 INSULATION RESISTANCE

50 MOHMS MIN. (100V DC)

### 4-5 GROUNDING

BETWEEN COILS AND CORE  
BACK BAR OF R/W CORE SHALL BE ELECTRICALLY BONDED TO R/W CENTER TAP

## 5. TEST CONDITIONS

THE AMPLIFIER WHICH WILL BE USED TO TEST READ/WRITE PARAMETERS SHALL HAVE AN INPUT IMPEDANCE OF 15 KOHMS SHUNTED BY 20 PF

## 6. CONNECTOR PIN

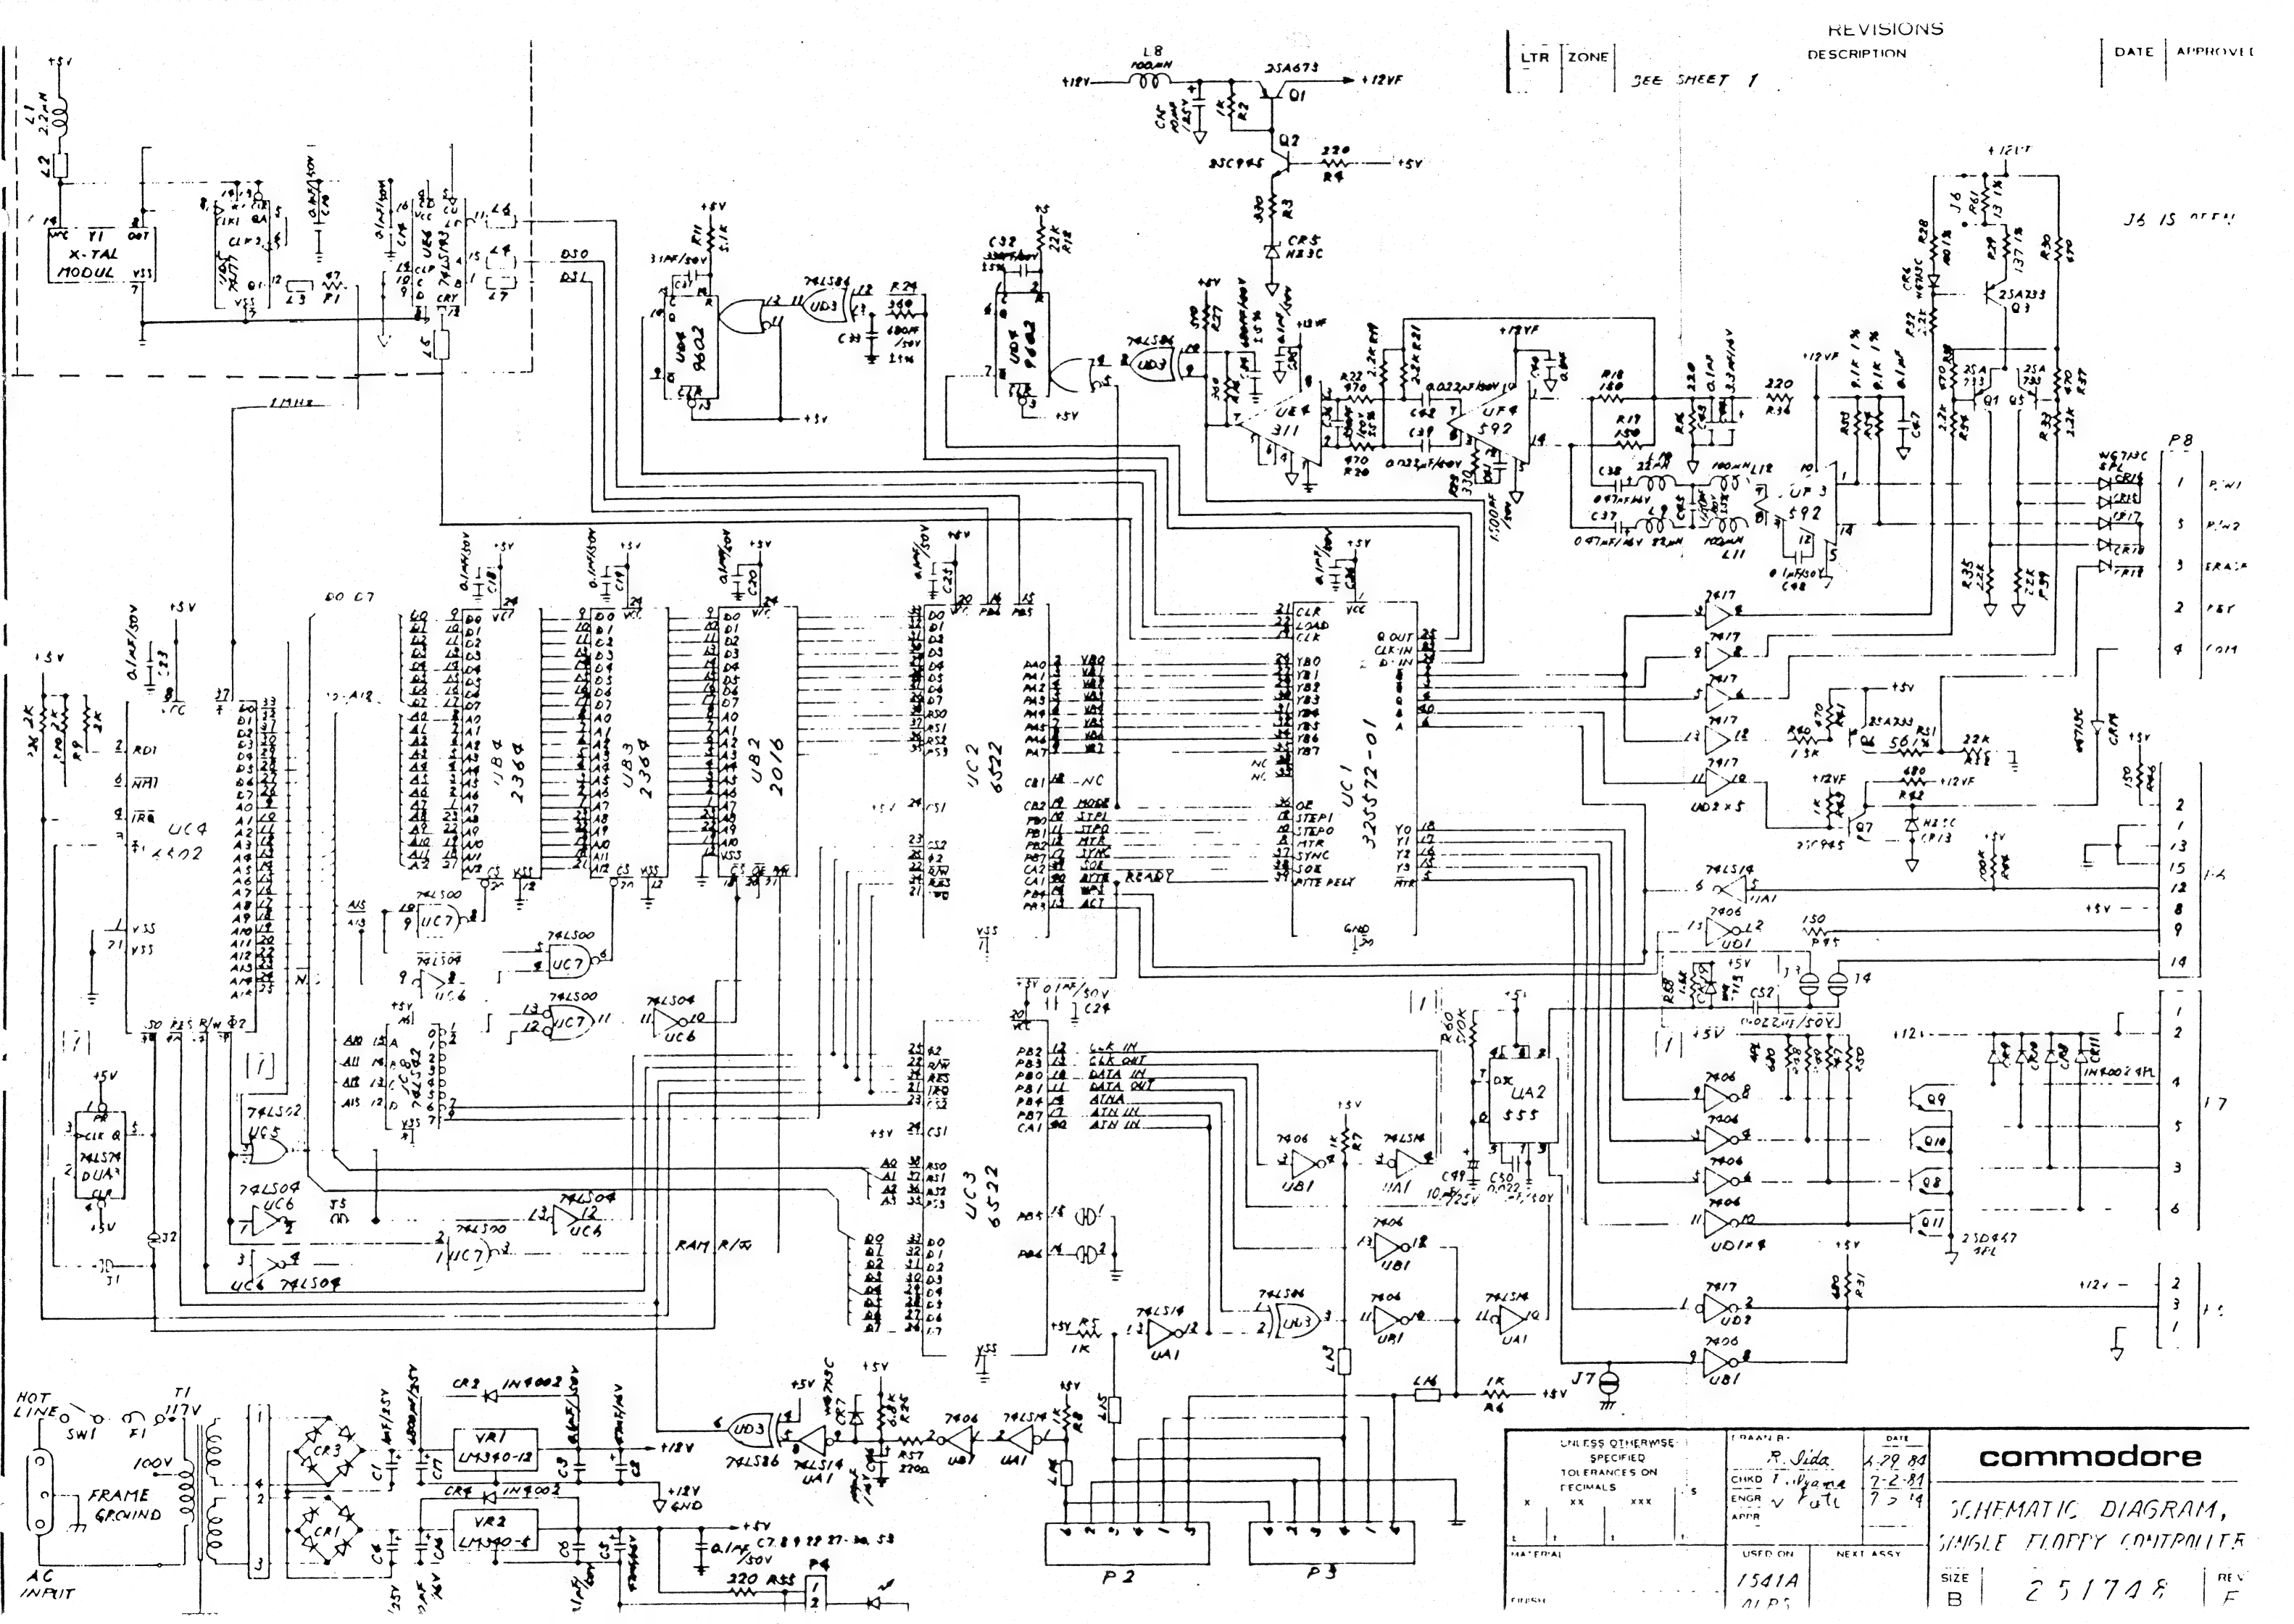

HOUSING  
HIROSE HIF 36-55-259C  
OR EQUIVALENT  
TERMINAL  
HIROSE HIF 3-2428SCFA  
OR EQUIVALENT

### Umbauvorschrift FLOPPY 1540/1541

Bei einigen Geräten vom Typ C64 trat ein Defekt an den Peripheriebausteinen auf, wenn nicht eine bestimmte Anschlußreihenfolge eingehalten wurde (erst Peripherie-Kabel, dann Netz-Kabel). (Siehe Seite 11 unten)

Ferner wurde der Datenbus zeitweise blockiert, wenn mehrere Peripheriegeräte gleichzeitig betrieben wurden (z.B. zwei Floppies oder Floppy und Drucker).

Die Ursache hierfür lag am RESET-Verhalten und am Betriebssystem der 1541 Floppy.

Um diese Mängel zu beseitigen gelten folgende Umbauvorschriften:

Seite 2 bis 4 :      lange Platinenausführung  
                          PCB No. 1540007 Rev.A bis Rev.E

Seite 5 bis 7 :      kurze Platinenausführung  
                          PCB No. 1540050 ab Rev.A

Folgende Testprogramme sind für die Floppy 1541 erhältlich:

|            |        |                            |                 |
|------------|--------|----------------------------|-----------------|
| 970140.c   | sfterr | Softerrortest              | (C64)           |
| 970141.a   | sfterr | Softerrortest              | (VC20 mit 16 K) |
| 970106.c   | sfteff | Softerrortest mit Stoptest | (C64)           |
| 970150.a   | fintst | Finaltest                  | (C64)           |
| 970127.a   | alpadj | ALPS Drive Adjustment      | (C64)           |
| ary-03     |        | Stop Adjustment            | (C64 oder VC20) |
| f3-03      |        | Finaltest mit              |                 |
|            |        | Kompatibilitätstest        | (VC20 mit 3 K)  |
| 970140.cl5 | sftary | für Tests nach dem Umbau   | (C64)           |

## S E R V I C E - I N F O

### Hinweis zum DOS:

Durch ein Versehen wurde in einige umgebaute Floppies 1541 ein EPROM 2764 mit der Bezeichnung 901229-05 Ae eingesetzt. Dieses hat die gleichen Fehler wie das ROM 901229-03 und muß wie unter Punkt 3 beschrieben ausgetauscht werden.

Die Version 901229-05 AE hat noch einen Fehler, der jedoch nur durch Abbruch des Formatierens (z.B. durch Öffnen der Laufwerksklappe) auftritt: Beim nächsten Formatierungsversuch fehlen die ersten Spuren, ohne daß eine Fehlermeldung erscheint. Nach einem solchen Abbruch sollte deshalb die Floppy aus- und wieder eingeschaltet oder folgende Zeile vor dem nächsten Formatierbefehl abgeschickt werden:

```
OPEN1,8,15:PRINT#1,"M-W"CHR$(81)CHR$(0)CHR$(1)CHR$(255):CLOSE1
```

### Laufwerk

Das Laufwerk wurde geändert, um das Verstellen von Stopeinstellung und Alignment bei Erwärmung zu verhindern.

Außerdem wurde der Luftspalt der Stopeinstellung vergrößert. Die neuen Laufwerke sind wie folgt gekennzeichnet:

A) Seriennummer > 00938841 oder

B) Markierung (grüner Strich) auf der Oberseite des Laufwerks neben dem Befestigungspunkt für die Spiralfeder!

### Interfacestecker

Sollte der Interfacestecker schwergängig sein, kann dies durch folgende Handgriffe korrigiert werden:

- Die sechs Befestigungsschrauben des Chassis im Boden lockern.
- Befestigungsschrauben festziehen.
- Falls erforderlich, Deckel vor dem Festziehen nach rechts drücken.

Tests nach dem Umbau

Stopring:

Für die Kontrolle und Justage der Stopeinstellung dienten folgende Programme:

Alte Laufwerke (0,25 mm Luftspalt): 970127 (Step 6)

Neue Laufwerke (0,35 mm Luftspalt): ARY-Ø3 (Stop Limit Test)

Justage: Die Stopeinstellung ist grundsätzlich mit dem Testprogramm ARY-Ø3 zu testen und evtl. zu justieren (auf 0.35 mm Luftspalt). Nach der Justage Schraube mit Lack sichern.

Track-1-Test: Mit dem Testschritt S des Testprogramms 970106.C ist die Stopeinstellung zu überprüfen. Dazu muß eine Track-1-Diskette verwendet werden.

Track-1-Diskette: Diese Diskette erzeugt man durch folgendes Verfahren:

- Physikalisches Löschen einer Diskette im äußeren Bereich (z.B. mit kräftigem Permanentmagnet, Löschung mit Oszilloskop am Leseverstärker überprüfen!).
- Formatieren von Spur 1. Dies sollte mit einem im Alignmet kontrollierten Drive erfolgen.  
(Kommando: open1,8,15,"nØ:x,ØØ)  
Sofort nachdem der Schreib-/Lesekopf auf Spur 2 positioniert hat, ist die Laufwerksklappe zu öffnen.

S E R V I C E - I N F O

Softerrortest: 2 Passes mit Programm 970140.C, in dem Zeile 1080 geändert wurde: NP=ØØ2

Starten des Programms mit RETURN

Testdauer: 8 min.

Am Ende muß die rote LED 1 x blinken = OK.

2 x blinken = zu viele Fehler im 1. Pass

3 x blinken = kein Zugriff zur LOG-Datei

4 x blinken = Abbruch beim Formatieren

Nach Aus- und Einschalten der Floppy mit Ø die LOG-Datei auslesen.

Es muß erscheinen:

Summary of Drive Ø

Number of Passes: 2

Total Errors = Ø

Countable Errors = Ø

HINWEIS: Um Ausfälle infolge von Zentrierfehlern zu vermeiden, sollte die Laufwerksklappe langsam während des Drehens geschlossen werden (z.B. unmittelbar nach dem Einschalten der Floppy).

Da der Antriebsriemen bei Kälte schlecht haftet, sollte die Floppy vor dem Test Raumtemperatur haben.

Für die Kontrolle des Alignments dient das Programm 970127(STEP 5: Alignment Test). Als Alignmentdiskette läßt sich auch eine 8050/8250 Alignmentdiskette verwenden, wenn auf das Sync-Signal zum Triggern des Oszilloskops verzichtet wird.

ACHTUNG: Der C64 und die anzuschließenden Fernseher entsprechen der Schutzklasse 2, während die Floppy 1541 mit dem Chassis auf Erde liegt. Dadurch kann der Portbaustein 6526 (U2) im C64 bei häufigem Verbinden und Trennen des Interfacesteckers (z.B. beim Softerrortest) zerstört werden. Um dies zu vermeiden, ist die Masse des C64 auf Erde zu legen (z.B. über das Halteblech am Cartridge-Stecker) oder Schutzdioden in den C64 einzulöten (siehe Bild S. 12).

Betr.: PCB-ASSY 250442 und 250446

CBM 1541

Motoranlauf beim Einlegen der Diskette

Bedeutung der Jumper J1 bis J7

BSW, 09.11.84

Auf den oben angegebenen Leiterplatten befinden sich nicht bestückte Bauteilpositionen. Nach der Bestückung folgender Positionen bewirkt ein von der Schreibschutzlichtschranke erzeugtes Signal, daß der Antriebsmotor beim Einlegen einer Diskette ca. 6 Sekunden lang dreht. Dadurch ist ein besseres Zentrieren der Diskette gewährleistet, wenn die Laufwerksklappe innerhalb dieser Zeit geschlossen wird.

| Position | Bauteil  | Kommentar   |
|----------|----------|-------------|
| UA2      | NE555    | Timer       |
| R58      | 1.5k     | Widerstand  |
| R60      | 510k     | Widerstand  |
| C49      | 10uF/25V | Elko        |
| C50      | 22nF/50V | Kondensator |
| C52      | 22nF/50V | Kondensator |
| CR19     | 1n4148   | Diode       |
| J3       |          | geschlossen |
| J4       |          | offen       |
| J7       |          | offen       |

Die Jumper J1, J2 und J5 sollten nicht nachträglich verändert werden, sie sind normalerweise geschlossen. Falls die Positionen UA3 und UC5 bestückt sind, sind J2 und J5 offen.

Der Jumper J6 paßt den Schreibstrom an den jeweiligen Laufwerkstyp an.

|          |       |             |

## 1540 Drive Einstellung

Die Kopf-Einstellung für die VC-1540 Floppy wird in der gleichen Weise durchgeführt, wie die Einstellung der CBM 4040 Drives. Z.B.: Der Stepper wird positioniert auf die Alignmentspur (17) und der Kopf ist dann richtig justiert, wenn beide Amplituden gleich groß sind (cat eye's).

A. Die folgenden Teile werden benötigt:

- a. eine Commodore 2040-3040-4040 Alignment Diskette
- b. eine formatierte Diskette
- c. das VC-1540 Einstell Programm
- d. einen Kreuzschlitz- und einen Flach-Schraubenzieher
- e. ein 1-Strahl Oszilloscope mit externer Triggerung

B. Laden sie das VC-1540 Einstellprogramm

- C. 1. entfernen Sie die beiden Plastikschalen des Gehäuses der Floppy  
2. lösen Sie die Platine vom Metallgehäuse

D. Stellen Sie ihr Oszilloscope ein auf folgende Werte:

Kanal1

externe Triggerung

20mV/cm

20ms/cm

Messung mit dem Tastkopf an UH5 Pin1 oder 14. Externe Triggerung auf UC2 Pin 9

E. Starten Sie das Programm, so daß Sie die Befehlsübersicht erhalten. Legen Sie die Alignment-Diskette in die Floppy ein.

## Befehlsübersicht:

- i - Eine Spur nach innen
- a - Eine Spur nach aussen
- b - Kopf fährt zum Anschlag und positioniert auf Spur 17 (Alignment Spur)
- h - Testet ob nach einem Spurwechsel der Kopf wieder exakt auf die Alignment Spur (17) zurück fährt.(Hysteresestep)
- e - Einstellung der Spur 1 auf 0.25mm Abstand des Stepermotors zum Anschlag
- t - Testet ob eine formatierte Diskette beschrieben und gelesen werden kann

#### F. Alignment Einstellung

Die Alignment Einstellung ist dann ok wenn nach bump sound und Hysteresestep die cat eye's eine kleinstmögliche Abweichung in der Amplitude (maximal 20%) voneinander aufweisen.

Ist dies nicht der Fall, so muß der Steppermotor verdreht werden, bis die Amplitudendifferenz im Toleranzbereich liegt. Um den Steppermotor zu bewegen lösen Sie die beiden Schrauben auf der Unterseite der Floppy. Sind die cat eye's nicht zu sehen, so muß der Steppermotor durch Eintippen von 'i' oder 'a' nach innen oder nach außen gedreht werden, um so die Alignment-Spur zu finden.

Durch Eintippen von 'b' (bump sound) wird erneut versucht, nach verfahren des Kopfes zum Endanschlag, die Alignment-Spur zu finden.

Durch Eintippen von 'h' (Hysterese) erfolgt ein Hysterese-Step.

Nach jedem dieser beiden Verfahren muß die Toleranz der Amplitude kleiner als 20% sein.

Nun schrauben Sie den Steppermotor wieder fest; danach muß die Einstellung ein weiteres Mal überprüft und gegebenenfalls korrigiert werden.

#### G. Endanschlag-Enstellung

Um den Endanschlag einzustellen drücken Sie die Taste 'e' (Endanschlag). Dann fährt der Kopf von Spur 17 auf Spur 1. Nun sollte zwischen dem Endanschlagswinkel und der Anschlagscheibe des Steppermotors 0.25mm Platz sein.

#### H. Motorgeschwindigkeitseinstellung

Auf der Unterseite der Floppy befindet sich eine Bohrung an der man das Potentiometer VR1 verdrehen kann um die Motorgeschwindigkeit einzustellen. Die richtige Drehzahl ist erreicht wenn man auf der Stroposkopescheibe ein stehendes Bild sieht.

#### I. Lese und Schreibtest

Legen Sie eine formatierte Diskette ein. Die Diskette wird neu formatiert und danach wird versucht auf jeder 2.Spur zu schreiben und zu lesen. Treten keine Fehler auf so ist die Floppy richtig eingestellt.

J. Austausch des Andruckfilzes

Bei Abnutzung oder Vibration (der Drive "singt") muß der Andruckfilz ausgetauscht werden. Mit der Zange wird die Halteklammer des Andruckfilzes zusammengedrückt und herausgezogen. Der neue Andruckfilz wird nur in die Halterung gedrückt.
